

Thanks for your order!

Some tips about Vader Lens installation-

To remove the old lenses from your Rubies helmet- they are held in place by 3 tabs, there is no glue. Using your thumbs, you should be able to pop the old lenses out. Start at the top tab, then the bottom and then the side tab should come right out. You can either keep the rubies lenses or dispose of them.

To install your new/replacement lenses-

Start at the corner of the eye socket. Then do the Top Tab (top of the eye socket you are working on), then the bottom tab. You can slightly bend the lenses while installing them.

If they are bulging in any areas, you can trim a little of the tab in the area where they are bulging. You can also try moving the lens back and forth slightly (left to right) while the lenses are installed and affixed in each tab slot. You can also trim the lease at each eye socket area if there is overlap. Do this slightly until you achieve a perfect fit. Sharp scissors will work great for trimming.
