

Installation Instructions for Trik Toys Helmet Liner

***I suggest using hot glue on the Velcro pieces for the best results.

1. Place the helmet Liner on your head and adjust fit by turning the dial on the head band until comfortable.
2. While the helmet liner is on your head, take your costume helmet (Stormtrooper, Vader, Boba Fett. Etc...) and place the helmet on your head.
3. Adjust the liner and helmet while on your head so you can see out of it and it is comfortable.
4. Using both hands, if possible, reach into your helmet and try to pinch the helmet liner and keep it still so you can take your helmet off while keeping the liner in still inside the helmet. The goal here is to keep the liner in the same place as it was where when it was most comfortable and allowed the best vision, so we can mark the clips for mounting.
5. If you did it, then mark on the helmet where all 4 of the ribbon clips touch the helmet. Now skip to step 9
6. If you had trouble, then try this. Turn your helmet upside down so you can look down into it.
7. Place the helmet liner inside the helmet, with the dial facing the rear of the helmet and the ribbon bands at the bottom.
8. Adjust the liner so it looks even, and mark all 4 of the ribbon clips where they touch the helmet. The nice thing about the Velcro is you can adjust the helmet liner up and down once it is mounted.
9. Fold each clip over the headband and place Velcro (either loop or hook, it does not matter) on the plastic sides of the clip, on each end of the ribbon (see below). Repeat this step on all 4 clips.

Before

After

10. Now, go to the areas of the helmet where you marked and add the opposite piece of Velcro in all 4 areas of the helmet.
11. Now, carefully place the liner in the helmet and stick Velcro pieces together and you are done!
